[mex264] T-pendulum

Consider a plane pendulum consisting of three pointlike masses $m$ at the ends of a T-shaped rigid frame of negligible mass and dimensions as shown.

(a) Find the Lagrangian $L(\phi, \dot{\phi})$ and derive the Lagrange equation from it.

(b) Find the Hamiltonian $H(\phi, p_\phi)$ and derive the canonical equations from it.

(c) Find the angular frequency $\omega_0$ of small oscillations about the stable equilibrium.

(d) Find the angular momentum $\ell$ when $\phi = 0$ if the pendulum is released from rest at $\phi = \pi/2$.

Solution:
